

CUSTOM RIBtype® PRODUCTS

SINGLE-LINE LOGOTYPES

A logotype (logo) is a single line of text on one piece of rubber. Logos make better impressions than combinations of single characters because of uniform typeface wear. Logos save time and prevent costly spelling and arranging errors. Orders should show size, typestyle, rib direction and maximum length (if space is limited).

MULTIPLE-LINE MATS

Multiple-line mats are two or more lines of text on a single piece. This is the best choice when large blocks of information do not change. Special designs, trademarks and typestyles can be combined. When only part of the text changes, we can cut a hole or notch in the mat. This will allow you to change part of the text using

Multi-line mat with art (mirror image)

RIBtype® logos or individual characters. Orders should specify overall size, typestyles and text sizes.

MIRROR IMAGE TYPE

Mirror image text is used in offset equipment when the type does not print directly on the object. Mirror image is also used when printing on the inside of clear packaging. Mirror image text can be read on the rubber type itself. The imprint made by mirror image type on paper cannot be read. The imprint is a™mirror" image of normal text.

SORTS

Sorts are single letters, numbers or punctuation marks. Sorts can be custom-made in any quantity.

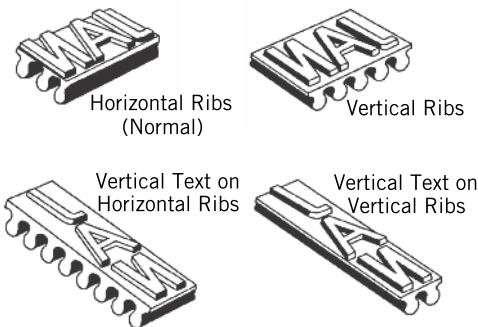

SPECIAL DESIGNS AND TYPESTYLES

RIBtype® products can be manufactured in more typestyles than the standard styles shown in this price list. We can create or reproduce special designs or trademarks. These can be easily added to logos or multiple-line mats. For best results, it is best to supply black-and-white, camera-ready prints.

RIB DIRECTION

RIBtype® is made with horizontal ribs, unless you request vertical ribs. Horizontal ribs run the same direction as the text appearing on the face of the type. Vertical ribs run at right angles (top to bottom) to the text on the face of the type.

™Reverse tie knot" means vertical ribs.

DEEP RELIEF RIBtype® is thicker overall, and the characters are deeper from the face to the base of the character. It is used to prevent the background from printing on uneven surfaces and because ink builds up less rapidly inside the characters.

RUBBER CHOICES:

NATURAL RUBBER RIBtype® is best for general purpose use with water-based or alcohol-based inks. Assortments are stocked in natural rubber with a standard hardness of 55-durometer. Softer 30-durometer natural rubber can be supplied. Oil-based inks and chemicals are harmful to rubber.

BLACK BUNA RIBtype® is oil and acid resistant. Buna is black with a standard hardness of 50-durometer. It is also available in hard 90-durometer or soft 30-durometer material. Hard buna works well in reciprocating air/electric powered printers. Soft buna helps in printing large, bold characters on uneven surfaces.

BLACK EP (EPDM)RIBtype® is excellent for use with acids, caustics, alcohols, glycols and water based inks. Available in 35 and 50 durometer. (Not recommended for use with kerosene based inks.)

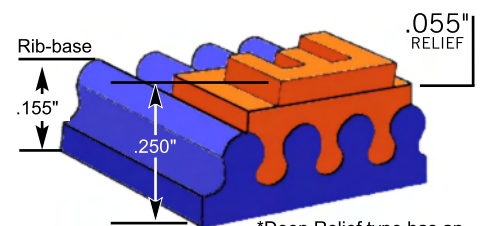

BLACK NEOPRENE

RIBtype® is very similar to buna. It is oil and acid resistant and makes excellent imprints. It is sometimes specified and sometimes used in place of 50-durometer buna.

GREEN PVC is flexible plastic material that does not transfer ink as well as natural rubber but provides greater durability in some applications. It is recommended for printing small text on plastic and for printing on Tyvek®. Because PVC transfers less ink, imprints may dry faster. Excellent for air/electric-powered reciprocating printers.

SILICONE (blue and white) RIBtype® is used for thermal (hot) ink transfer printers because of its high heat tolerance.

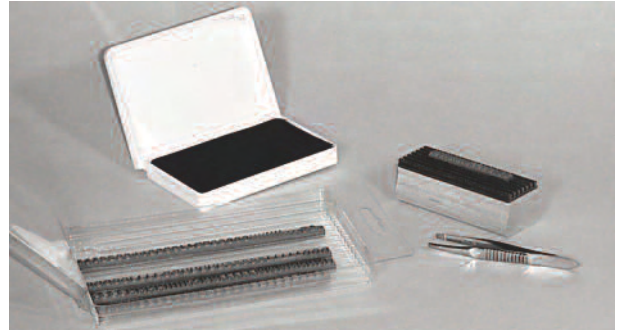

TYPE SPECIFICATIONS

*Deep Relief type has an overall thickness of .270" and relief of .110".

OFFICE KITS

SPECIFICATIONS			ITEM	ITEM #	PRICE
RIBTYPE 123	1/8" 3.18mm	2	RT10	79996	\$23.80

Replacement Tweezers Item # 70089...\$2.30

R1/D1

RIBTYPE OFFICE KITS

These sets allow you to make your own stamps for emergencies or when changeable copy is required. Each set includes a "5A" letter/number set, a compact stamp mount that holds up to 3 lines of type, a black stamp pad and tweezers. Mounts for the RT10, 11 and 12 are 7 ribs x 3". For the RT13 they are 11 ribs x 3".

HANDLE STAMPS

Minimum size is 1/2" x 1". For smaller sizes, use peg stamps. (Same item no. and pricing)
RIBtype moulding style mounts are generally available in heights of 1/2" to 2" in 1/4" increments.

Standard rocker widths (length of ribs in curved direction) are 3", 4", 5", 6", 8".
Wooden rocker w/reg. handle add \$19.10 up to 20 sq. inches. Over 20 sq. in. use \$1.01 per sq. in. x total sq. in.
#70416 - Aluminum "G" handle add \$22.10 (Minimum mount size for use with "G" handle is 2" X 5").
Stronger 4-3/8" long wood "I" handle add \$10.70.

WOOD ROCKER RADIUS WITH TYPE
3" ROCKER - 6-1/4" RADIUS
4" ROCKER - 4-3/4" RADIUS
6" ROCKER - 9-3/4" RADIUS
8" ROCKER - 15-1/4" RADIUS

- Additional wood handle added to mount
- Glue mats in holder
- Glued handles
- No extra charge for buna base or sponge cushion
- Weatherstripping add

SELF-INKERS, BASE SHEETS

RIBBED BASE SHEETS

Base-sheets can be cut to size and adhered to coding and marking machines or hand stamps. The base sheet has ribs to hold the type securely in place during printing.
